

Bank Account Manager

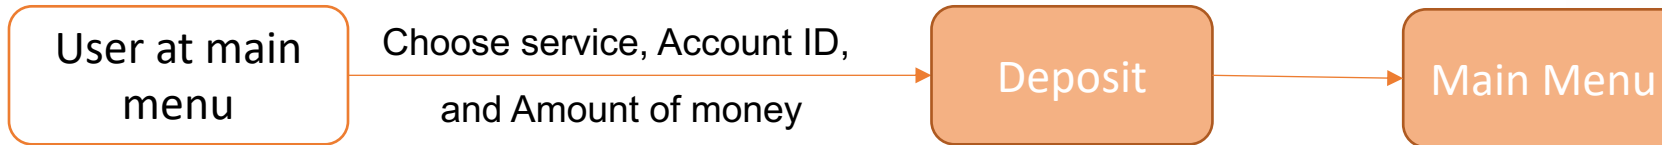

Users' Path: to better understand the information and program we need for this system.

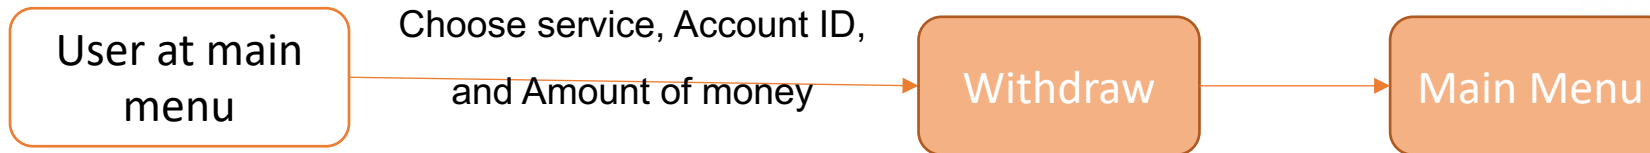

- Create_account: Users could create a new bank account by inputting their name and an initial deposit.

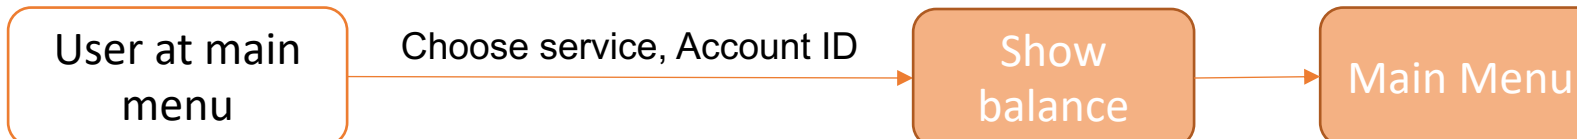

- Deposit_money: This function should allow users to deposit money into their accounts.

- Withdraw_money: This function should allow users to withdraw money from their accounts.

- Check_balance: This function should display the current balance of the account.

Feature of my system's management

- There is always a selection menu for users to choose from, in case they get lost.
- The program will always require users to input their account id so as to process the function for security concern.
- The program should handle user input errors, such as non- numeric inputs for deposit or withdrawal amounts.
